# MEDIA RELEASE

## Update on restoration of supply at PowerGen Pt. Lisas Power Station on 06 August, 2022

This morning, at 9:11 a.m. there was an electrical fault at the Point Lisas Switchyard (which connects the generators to the Electricity Grid). This led to the operation of the automatic protection system and loss of generation from three (3) of the eleven (11) Units at the Point Lisas Power Station, amounting to approximately 200MW to the National Grid across Trinidad.

PowerGen staff responded immediately to find a workable solution in the shortest possible time, bearing in mind that the task needed to be done manually and with the highest level of safety. Within one hour of the event, two replacement Units (180MW) were brought online and supply fully restored at approximately 11:30 a.m. We are grateful for the cooperation provided by T&TEC.

PowerGen takes pride in our responsibility as T&T's largest and longest-serving independent power producer, and we continuously strive to improve the service provided to T&TEC and by extension the Nation.
